

Optimal Unwinding of Goods on Barrels

Extremely easy unwinding
and lifting goods on barrels

Strength saving handling on
construction sites

Handling and transportation
of cables, chains, ropes etc.

All-round and easy handling
of goods bundled and on
barrels

Put together in three pieces
makes it space saving

Ideal for work shops, pro-
duction plants, construction
sites

No service or maintenance
costs

Unwinding Device

for weights up to 650 kg

BARTELS

Design

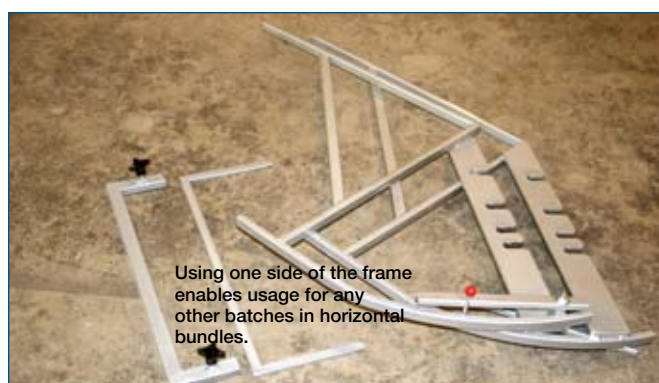

Solid steel construction, welded frame, srewable handle unit, hinged shores.

Function

The side sections and the handle unit are connected. An axle is pushed through the cable drum on which the drum is fixed between two crowns. The cable unwinder is moved to the cable drum and the axle is handled with the fitting retainer. The unwinder is tipped by pressing the handle bar to move the drum to a suspended position. Once the safety supports have been folded out the unwinder is solidly positioned and the material can be unwound.

The user never needs to manually pick up a full barrel.

	Order-No.	116.200
capacity / pair	kg	400
overall barrel measurement	mm	until approx. Ø 1000
dead weight	total ca. kg	32
