

## E-Drive for easy roll-out

Ideal with very high loads  
and oversize long material

Saves strength during  
frequent handling

Can be retrofitted also for  
individual shelves

***Non-standard performances are standard for us***

## Switch box

### Design:

For easier roll-out of the roll-out shelves for very high loads or heights, the E-drive - serving each individual shelf - simplifies the work.

Using a control unit which is attached to an optional swivel boom, the user selects the side or the shelf from or to which the roll-out action is to be performed.

### Details that matter:

#### Controls:

Keyswitch to activate the control unit; selector switch for each side; selector switch for each shelf; pushbutton for the "roll-out function".

#### Rating:

Control voltage 24 V; switch box 220/240 V; motors 220/240 V with overload circuit and reset button for the motors.

## Control unit for operator
