Design

The basic rack has a total 7500 kg loading capacity consisting of two upright frames from pallet rack components.

Each shelf is consisting of an upper and lower guide and two traverse guide arms with beam-to-column connectors to hang in drawers. The beam-to-column connectors have to be fixed to the upright frames with a security pin. Each frame is punched in 50 mm distance to individually adjust each shelf in height. Minimum height of each shelf: 150 mm.

Interlock that locks all other shelves in when one shelf is rolled out, as per reg. UVV BGR 234 (former ZH 1/428).

Add on rack: same as basic rack, but with just one upright frame.

Color: Upright frame galvanized, drawer: red RAL 2002, available in all RAL colors upon request!

Detailed specials:

This heavy weight material rack is ideal for space saving storage of pallets, big tools or heavy loads.

The metal base is offered for space saving storage for even small parts, tools or boxes. Naturally, any other base material possible- please request!

Each drawer is easy to adjust in height due to punched frame to meet the ever changing storage requirements.

Each drawer is 2/3 or 100% extractable.

Floor anchor is necessary.

Optional custom made measurements and other number of shelves possible!

Beam to column and drawers with ball bearing guides.

Interlock - only one drawer extractable at a time.
