

## Quickly tipped directly from the stacker

Empties itself

Erects itself

Self-acting lock

No physical effort  
required

Secure handling

On pallet with fork  
pocket

Mobile with swivel and  
fixed castors

For lever roller jack  
usage

***Non-standard performances are standard for us***

# Self-Tipping Skip

up to 2,000 litres content

**BARTELS**

## 3 configurations:

- on pallet
- with two swivel and fixed castors
- for roller jack usage

## Advantages:

- easy - secure - quick - no physical effort necessary
- automatic tipping and emptying after unlocking
- goes automatically back to starting position
- automatic self-locking

**Design:** solid base frame made of U-beam; container of sheet metal with strengthen border, 2-3 mm thick, inside completely welded.

Container: blue RAL 5012. frame: red RAL 2002.

- Optionally:**
- galvanised or V2A - please inquire!
  - absolute liquid tightness (see accessories)

**Upon request we can also offer further dimensions, volumes or designs – please inquire!**

## Automatic activation:

Tipping easily even from high up, no need of linkage or something comparable. The operator does not have to leave the stacker; the activator of the self tipping skip is just to be pushed against a solid edge – e.g. of the container – and tipping process is automatically activated; after emptying the self-tipping skip automatically locks itself again.

The expediently attached automatic activation also enables tipping far into the catching device and not only emptying at the edge.

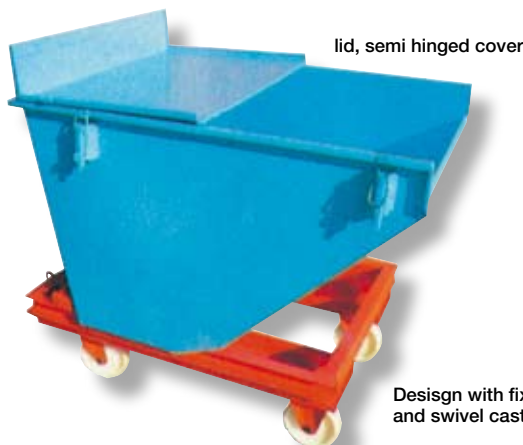

## Various accessories:

**Lid half-folding** with grip and locked clamps

**Ball valve 1/2"** and removable filter at the bottom, as well as liquid tight welded.

## Mini-size skip

Mini-size version with extremely low overall height of only 552 mm, optimal use under pressures, drill machines, lathes etc...
